Experience

January 2019 - February 2020:

- **System administrator.** Creating local networks by commutators, hubs, and routers in schools with firewall rules that restrict access from external networks and make data publicly available.

April 2020 - June 2021:

- **Web developer.** HTML, CSS, JavaScript, and PHP for creating static/dynamic websites and working with databases MySQL and Sqlite3. You can also check my web page.

July 2021 - Present:

- **Self-employed Junior DevOps Engineer.**
  - AWS/Azure Cloud engineering, Delivering continuous integration and deployment for clients using GitOps and Cloud platforms. Automating processes with Jenkins, Terraform, Ansible, and Docker containerization.
  - Operating different distributions like CentOS and Ubuntu administering and writing bash scripts for making backups, and auto-setup scripts for the Linux environment.
  - Worked with different Python frameworks (Flask, Aiogram, Tkinter, etc.): created a music downloader with a graphical interface, a multithreading parser for getting the necessary content from multiple pages, and asynchronous telegram bots with databases, also familiar with web frameworks like Django and Flask.

Education
