My IT Portfolio: https://alytvynenko.online/

Dear Sir/Madam,

Please accept my resume for the Junior DevOps Engineer. I am confident that my background and skills in research techniques will prove to be an effective match for your qualifications.

I am interested in DevOps Engineering, CyberSecurity, Programming, and Networks as a consequence I can create pipelines using Git (GitOps), Jenkins, Docker, and GitHub Actions. I have developer experience programming in Python, and several projects of my own like bots, parsing, graphical applications, and backend sites, some of which have databases. Check my GitHub for these projects.

I do not have bad habits as a result enjoy having a healthy life, therefore spending my free time getting new knowledge, and meeting with my friends. I also like doing sports and taekwondo.

My research experience has been a positive one due in part to my interpersonal skills. I work well in teams, at the university and used to be a leader of a group. I am reliable, organized, and enthusiastic to learn and improve my skills. My main goal in applying for a job is to develop my skills in a professional area and become an excellent specialist. I am sure that I will carry over the enthusiasm and skill to do a perfect job at a company.

I appreciate your consideration and look forward to hearing from you.

Respectfully,
Andrii Lytvynenko
